

Corporate Overview

Professional Services for the Construction, Geotechnical and Geoscience Industries

Construction Consulting & Testing (CCT) is an independent geotechnical engineering, geoscience and materials testing firm established in 1996. Our professional services are focused toward the construction industry, including engineers, architects, private owners, government agencies, contractors, and material producers.

In order to meet our clients needs and expectations our laboratories undergo annually the rigorous American Association of State Highways and Transportation Officials Accreditation Program and the Cement and Concrete Reference Laboratory Accreditation Program. Our laboratory facilities are also inspected and certified by the Ohio and Michigan Departments of Transportation. These certifications and accreditations are not only a necessity to conduct work on publicly funded projects, but they are also indicative of our organization's commitment to maintaining high standards.

In addition to our accredited laboratories, we also have a diversified staff knowledgeable in facilitating the progress of all phases of construction and subsurface exploration projects. Our field and laboratory services are focused on providing real time information and recommendations to on-site project management. CCT's professional staff are trained and experienced in Geotechnical and Pavement Engineering; Geoscience and Subsurface Exploration; and Construction Materials Testing.

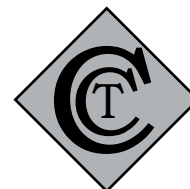

We are prepared to meet the challenges as we expand our client base and look forward to the opportunity of providing you with the quality proactive professional services our clients have come to expect since 1996. Our strategically located Metro Toledo and Metro Detroit offices are prepared to meet your expectations and participate on your next project.
